High Temperature Systems up to 1100°F (600°C)

- (A) Above Ground Composite Insulation System
- (B) Below Ground Conduit/Air Space System

- (E) Vacuum Insulated Piping for Applications -452°F (-269°C)

Low Temperature, LNG & Cryogenic Systems up to -297°F (-183°C) to 400°F (204°C)

- (C) Above Ground Insulated & Jacketed System
- (D) Below Ground Insulated & Jacketed System

- (F) Double Wall Containment Piping Systems

Pre-Engineered & Pre-Fabricated for:

- Oil
- Fuel
- Petrochemical
- LNG & Vent Gas

Rovanco Piping for the Oil & Gas Industry is available with a wide array of options & configurations engineered to meet your specific application & requirements.

- Carrier pipe can be welded or seamless; stainless or carbon steel; & available in 1/2" - 36" diameter.
- Insulation can be high temperature polyisocyanurate foam with a 25/50 flame/smoke rating per ASTM E84; Pyrogel® XT-E; Cryogel® or Vacuum Insulated for cryogenic applications.
- Outer containment or conduit casings can be stainless steel; spiral welded carbon steel with RhinoCoat fusion bonded epoxy for below ground or red mil coating for above ground; High Density Polyethylene (HDPE); or spiral lock seam aluminum, galvanized or stainless steel for above ground applications.

A full-line of ancillary support elements are also available and engineered to perform to Oil & Gas Industry standards.

- Heat Trace

- RhinoJoint™

EN489 Certified, Air-Testable
& Water-Tight Field Joint

- Leak Detection

- Pre-Insulated
Underground Valves
