

RhinoJoint EN489 Certified Joint Kit

# Rovanco Piping Systems

Thousands of Miles of Experience

## Not All High-Temp Systems Are Created Equal

Energy Efficient Piping With A Fail-Safe Joint Kit

## Insul-800 Elite Steam & High-Temp Water Systems

For over 44 years, Rovanco has provided the most energy efficient pre-insulated piping systems in the industry. Rovanco's Insul-800 Elite line, featuring Pyrogel® XT insulation, continues that tradition.

Insul-800 Elite leads the industry in energy efficiency, BTU savings and boasts an EN 489 Certified Joint Kit that will not compromise the piping system's ability to minimize heat loss or affect its excellent moisture resistant properties. Many piping options and Pyrogel® XT insulation thicknesses are available so a system can be customized to fit your specific application.

This is the next horizon for pre-insulated piping systems designed to handle the extremely high temperatures associated with hi-temp steam systems. Let Rovanco help you design a pre-insulated piping system that will provide you with the ideal level of efficiency and cost effectiveness.
