

RHINOPEX

IN A FAST PACED WORLD WHERE TIME IS MONEY

Do you want to install pipe by welding, brazing or soldering it?

Coils can be handled easily by 2 people.

Or do you want to install pipe by uncoiling it?

Rhinoflex flexible pre-insulated piping has taken over the market for 6" and smaller pre-insulated pipe. It is a high quality product that has the lowest installed cost of any pre-insulated pipe. There are more than 500 miles of flexible pre-insulated pipe installed in the U.S. with more than 5,000 miles installed worldwide over the last 25 years!

Rovanco's Rhinoflex pre-insulated flexible piping is manufactured with either a PEX-a or Polyethylene (PE) carrier pipe and comes in the longest continuous lengths available in the marketplace. These long lengths result in few or no underground joints. This saves you up to 60% in labor costs – 25 to 40% over conventional field insulated steel!

Rovanco's "Thousands of Miles" of experience coupled with the tens of thousands of successful piping systems Rovanco has installed worldwide, assures you will get the correct product for your specific piping systems.

Contact Rovanco for a quote. Price of copper and steel has made Rhinoflex even more competitive.
